

# Systems, Sectors and Zones

## Spoilers ahead

This page contains spoilers about the total number of sectors as well as their names and resources. If you want a spoiler-free introduction take a look at the [The X-Universe And Map](#) page

## Universe Structure

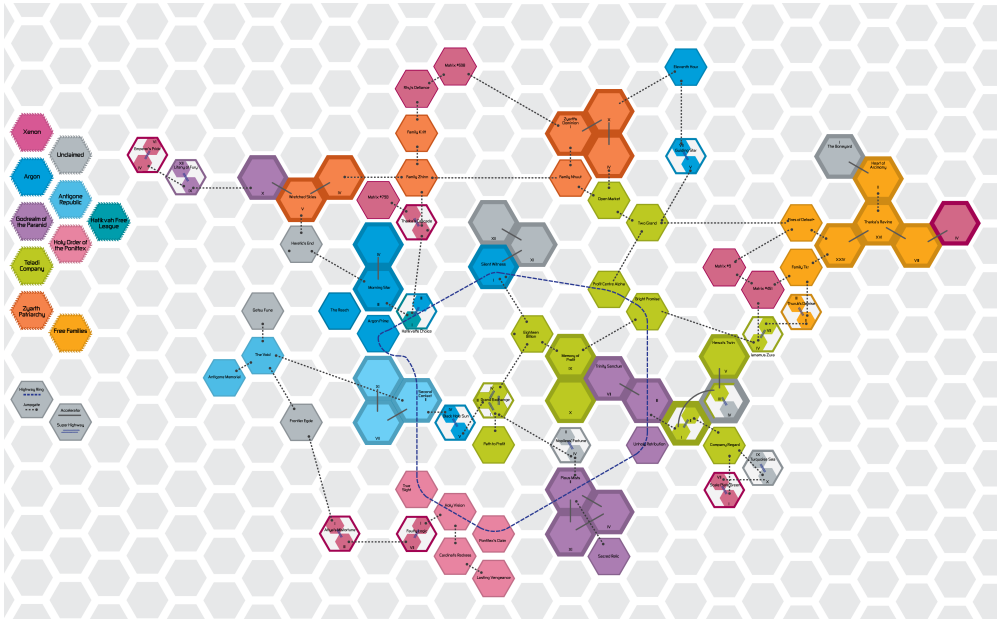

The X-universe consists of 50 **Systems**, with each **System** being constructed of up to 3 **Sectors**. Objects in Sectors sit in **Zones**, which can be considered to be things within radar range of an object. The location of systems and sectors, how they connect to each other, as well as the location of major Factions stations like shipyards and trade stations are the same in any game start (with the exemption of the tutorials).

In total there are 63 **sectors** linked by Super Highways (between relatively-close sectors in a system), Orbital Accelerators (between very distant sectors in a system) or Jump Gates (between systems). You may also occasionally discover **Anomalies**, which provide 1-way routes to a random anomaly in another sector. For further details about the features that connect systems and sectors, see the [The X-Universe And Map](#) page of the manual. Basics on how to efficiently travel through the universe can be found on the [Piloting And Travel](#) page.

### With Split Vendetta DLC

More Jump Gates have reconnected to the universe adding 26 new **Systems** to the north of the network with a total of 30 new **Sectors** to explore. With these new sectors come new routes between known space, fresh opportunities for exploitation and additional Xenon threats
